# SKILLSBUILD FOR COLLEGES

EDUNET FOUNDATION

## APSSDC– EDUNET FOUNDATION

- Future Skills Program

- Students Orientation

**Program 15<sup>th</sup> May 2024 – 17<sup>th</sup>**

**May 2024**

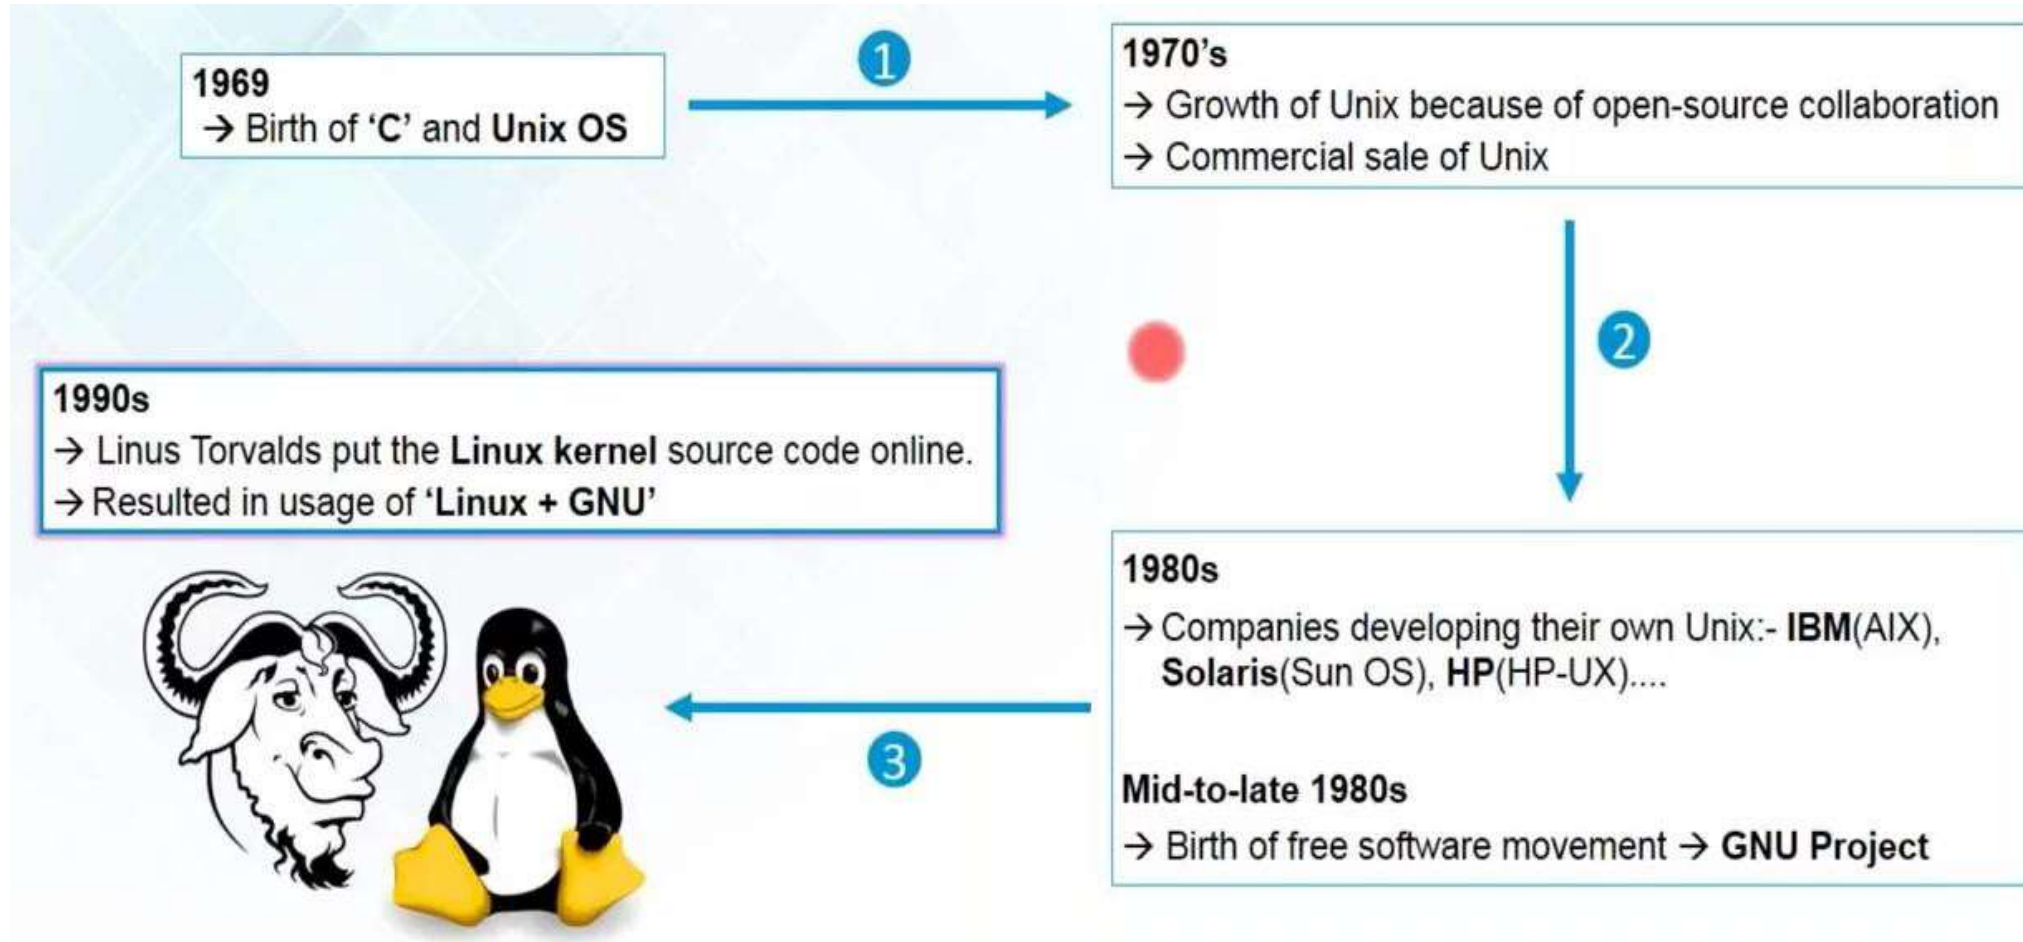

# WHAT WILL YOU LEARN TODAY?

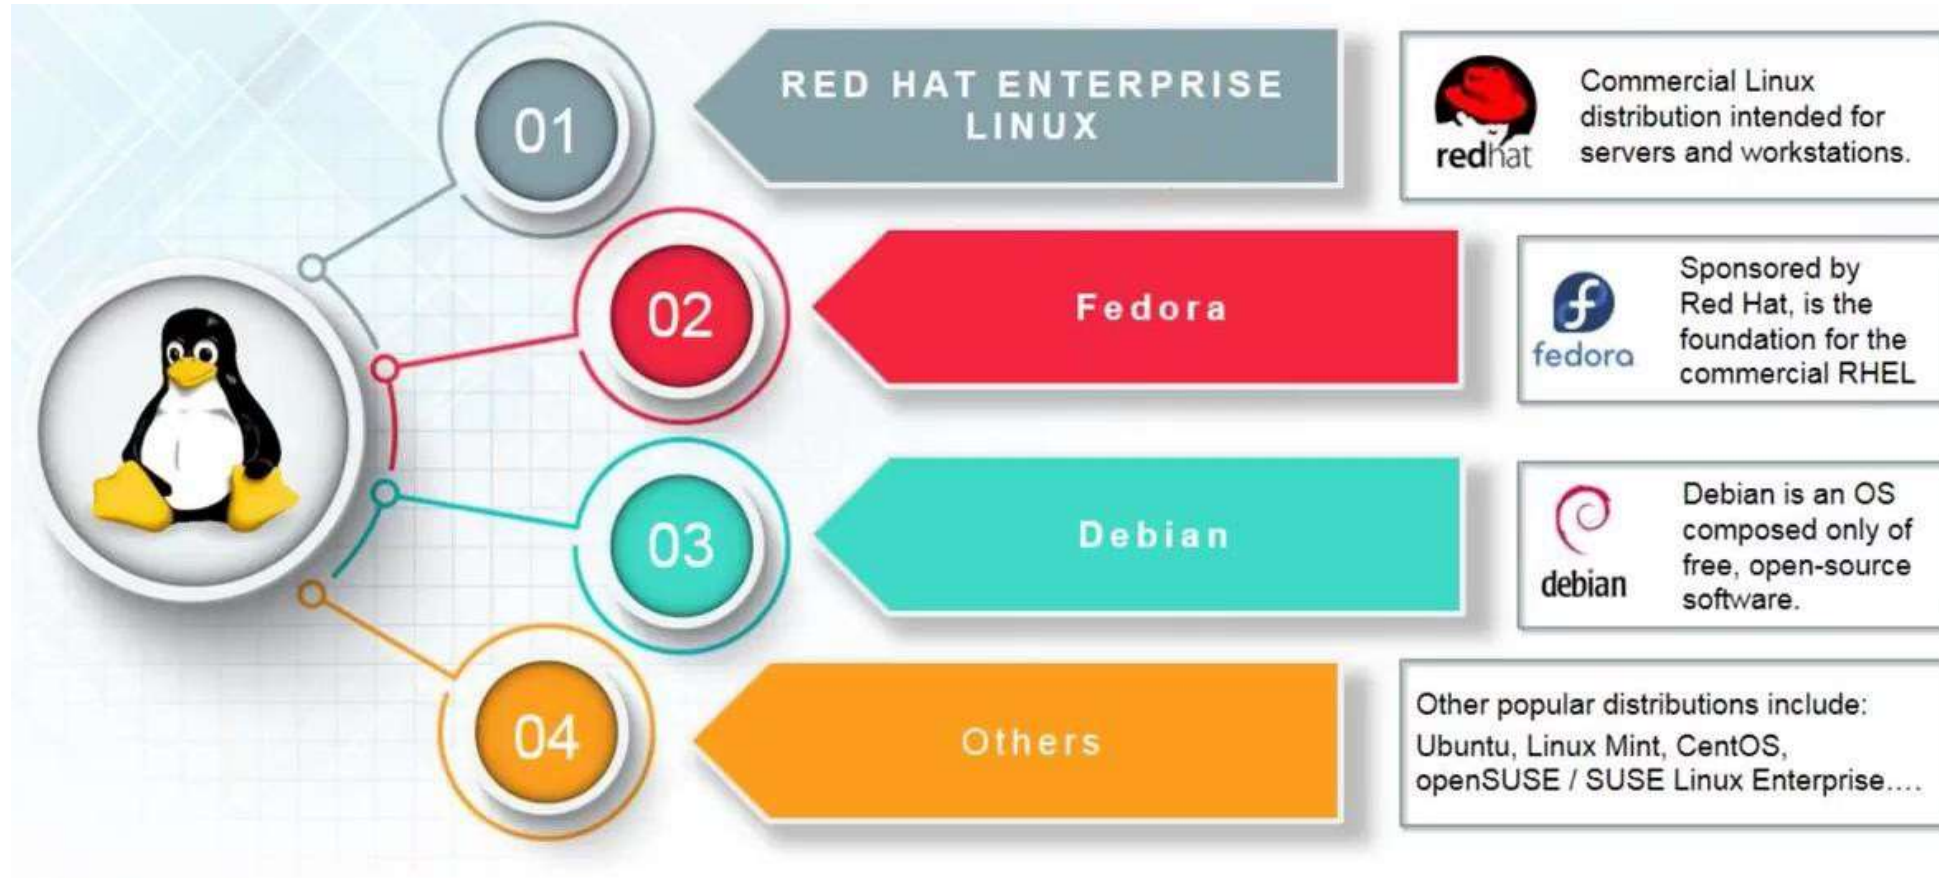

- Birth of Linux
- Various distributions of Linux
- Getting starts with Linux
- Introduction about virtual machine
- Basic Linux Commands
- Working files & Directories
- Adding deleting user
- Working with apache server

## Birth of Linux

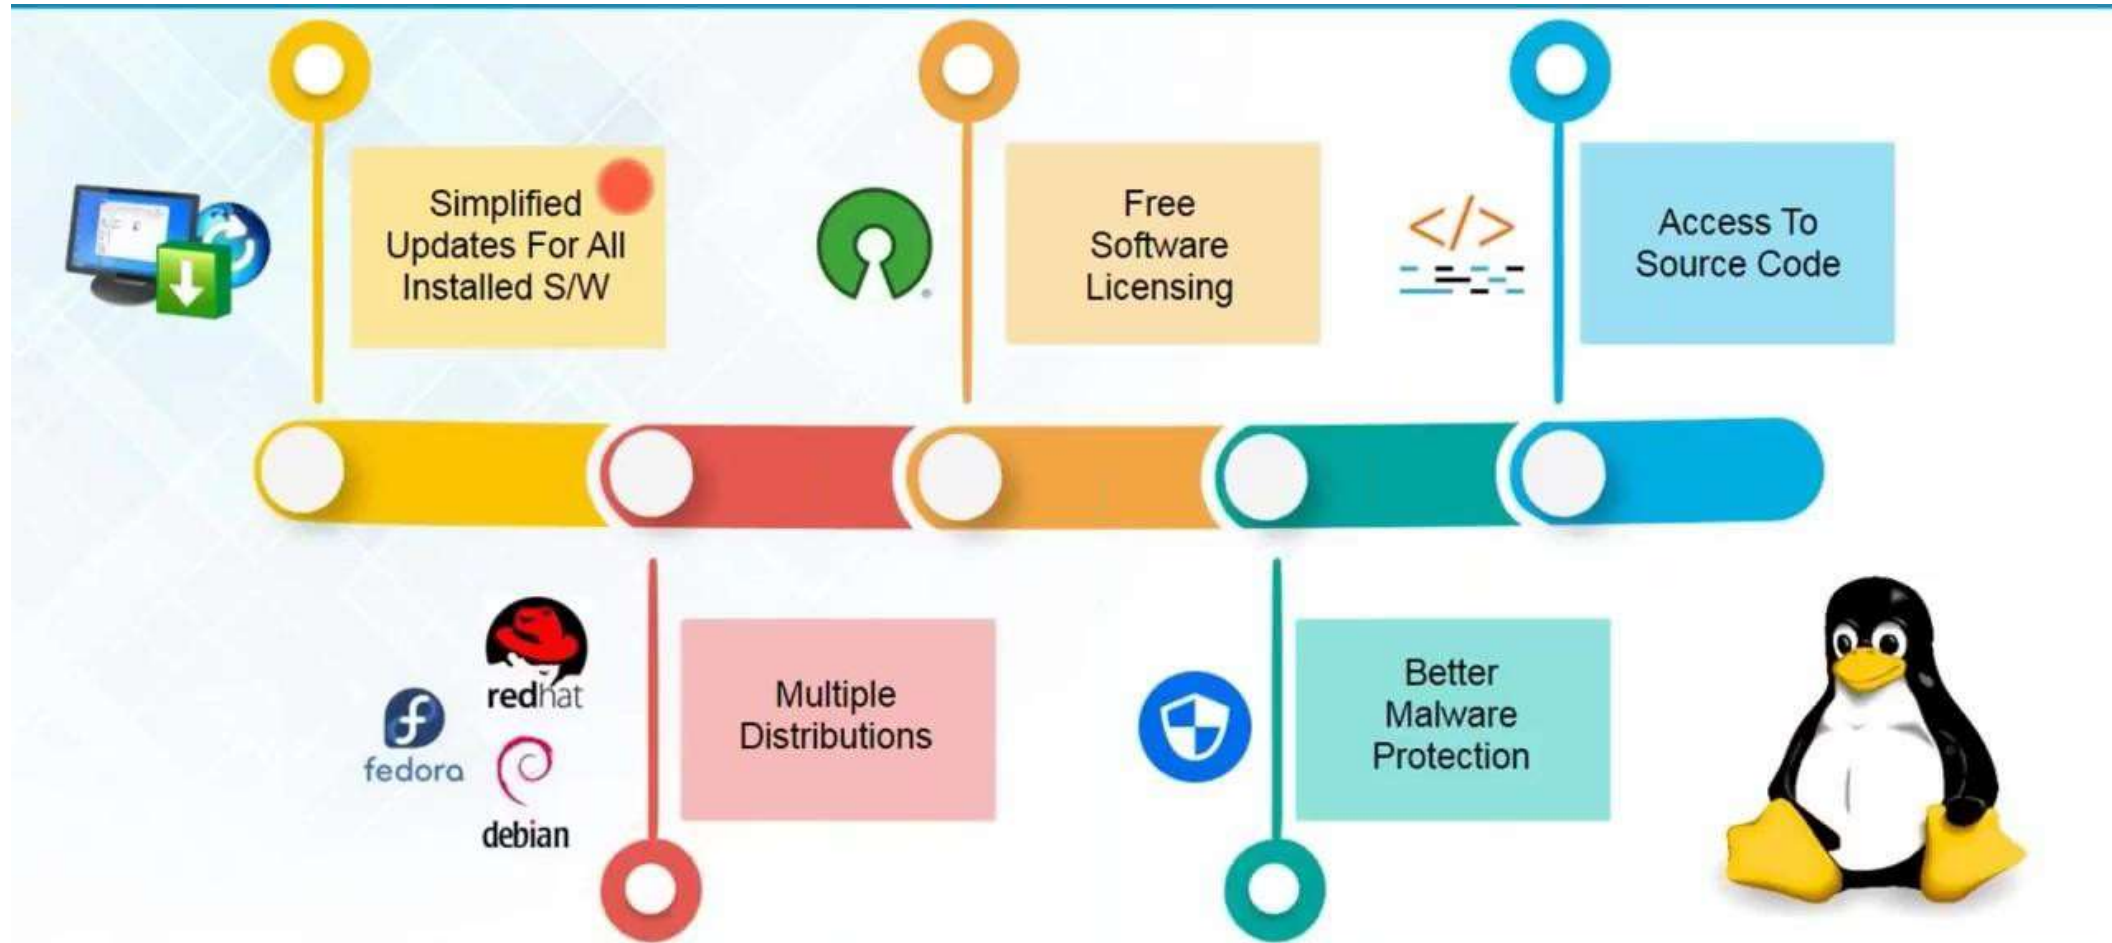

## Linux Varies Distribution

# Linux Features

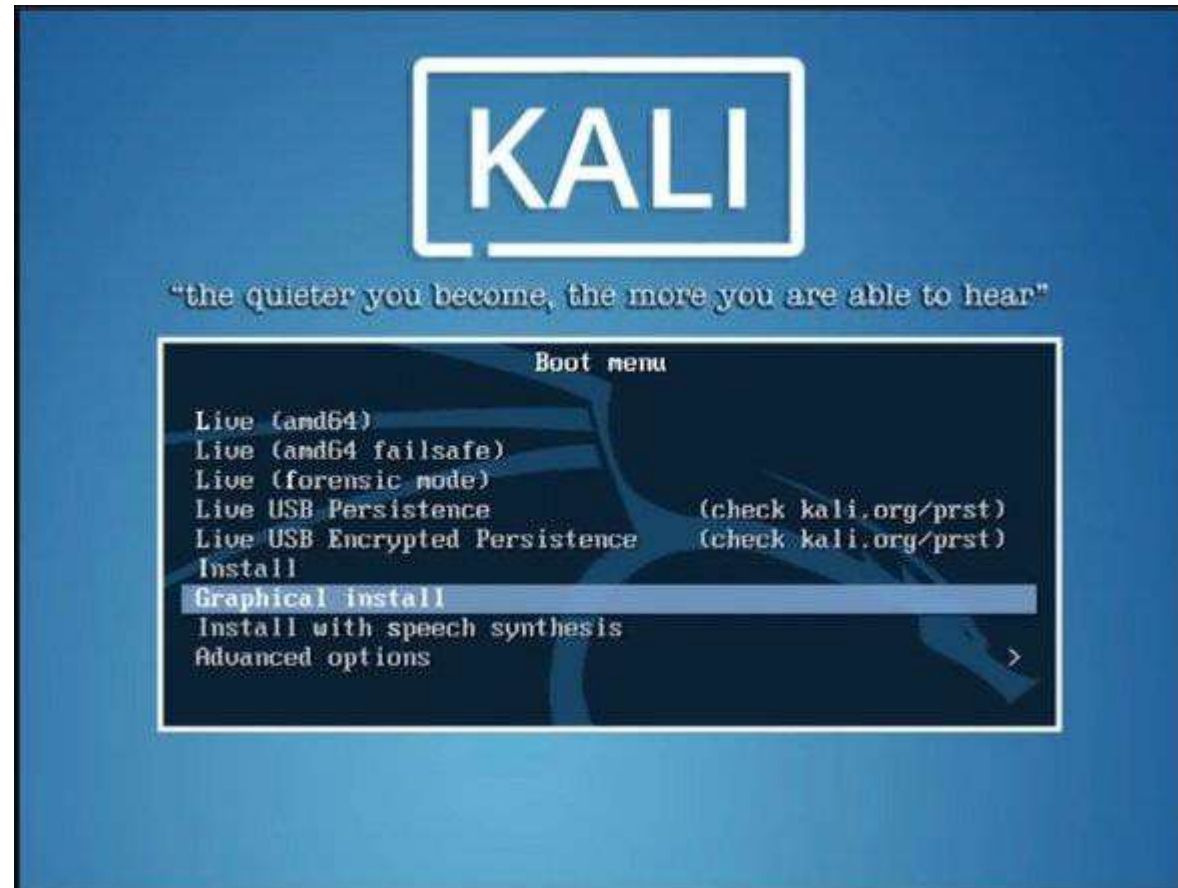

## Virtual Machines

## Linux Installation

# WORKING WITH DIRECTORY COMMAND USING TERMINAL (C – COMMAND LINE INTERFACE) (GUI)

- Commands | username: kali and pass : kali
- Cd (exit)
- Cd ..
- cd [directory]: Change the current directory to the specified directory.
- cd - : Switch to the previous working directory. This is useful for toggling between two directories.
- cd ~ : Change to the user's home directory.
- cd / : Change to the root directory.
- cd .. : Move up one directory in the directory.
- cd ../.. : Move up two directories in the directory.
- cd /path/to/directory : Change to an absolute path.

# MAKE FOLDER & DELETE FOLDER

- `Mkdir <folder_name> // This command using create folder`
- `Rmdir <folder_name> // Remove empty folder`
- `Rm -r <folder_name> //Remove with file folder`

# MAKE FILE

- Leafpad or mousepad,touch
- Leafpad <file\_name.extention>
- Game.py,note.txt,...
- Ex : leafpad

## LIST COMMAND (LS)

- ls: Lists files and directories in the current directory in alphabetical order.
- ls \*.etc | ls \*.py: Incorrect syntax; attempts to list files with .etc extension and pass their output to list files with . py extension, which might not work as intended.
- ls -a: Lists all files (including hidden files starting with .) in the current directory.
- ls -laS: Lists detailed information for all files (including hidden ones), sorted by file size in descending order (largest to smallest).

# FILE OPERATIONS

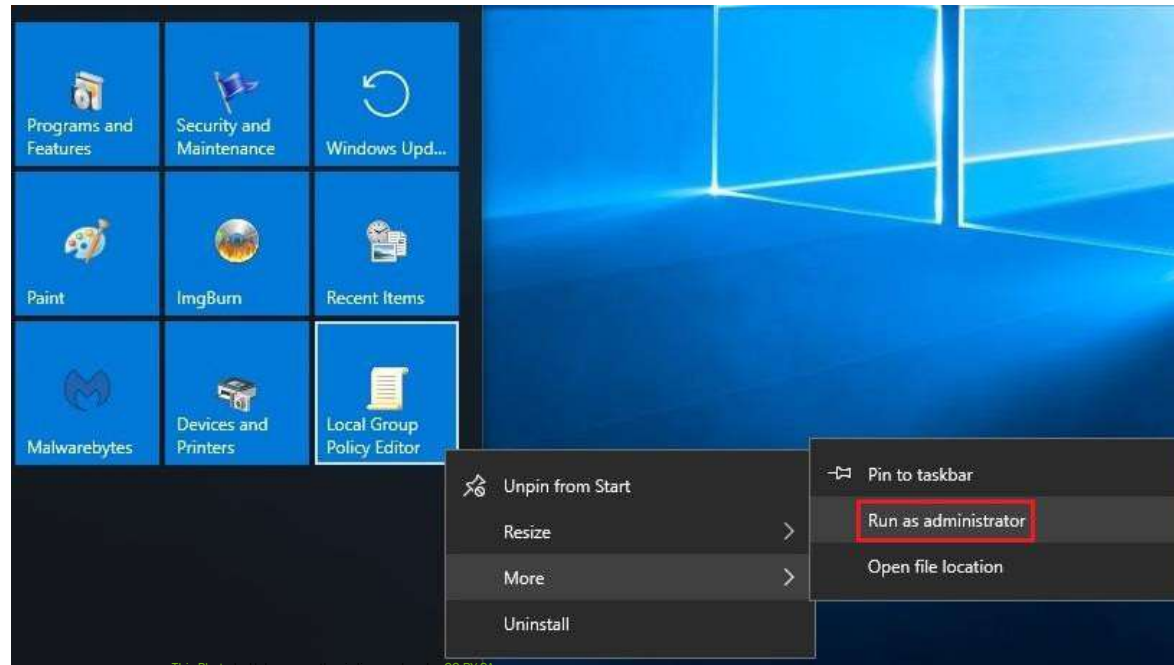

- Rm <file\_name>
- Cat <file\_name>
- Pwd //present working directory
- Cp <source(file)> <destination(path)> | copy , paste
- Mv <source> <destination> | cut,paste

# ROOT ACCESS CMD

➤ Sudo su // root access | | sudo -i

This Photo by unknown author is licensed under CC BY-SA.

# GREP CMD & ECHO CMD

- `grep -i est cars.txt`
- Echo cmd
- `x=10`
- `echo $x`

# ADD USER DELETE USER

- Sudo adduser username
- Sudo deluser username
- Shift user
  - su username
  - passwd
  - exit

# NETWORKING COMMANDS

- 1. **`Ping`**: Checks the connectivity between two networked devices by sending packets to a specific destination and waiting for a response.
- 
- 2. **`Nslookup`**: A tool used to query DNS servers for domain name or IP address information.
- 3. **`Ifconfig`**: Displays network interface configuration information on Unix-like operating systems (commonly used in Linux), showing details like IP addresses, network masks, etc.

# WORKING WITH APACHE SERVER

- Service apache2 start
- Service apache2 status
- Service apache2 stop

# HOSTING WEBPAGE

- Hosting webpage using Apache server
- Service apache2 start
- Visit Path `/var/www/html`
- Add index.html file include basic html tag
- Open terminal type `ifconfig` get local ip
- Put that local ip into firefox
